

# How to maintain your new Cherrypine™ timber

Congratulations on your purchase of Cherrypine™. To keep your timber looking good well into the future we recommend the following installation and maintenance program.

## Protecting your Cherrypine timber

Use of a weather resistant finish or decking oil will reduce the effects of weathering. We recommend an initial application at time of installation and then on an annual or semi-annual basis depending on weathering conditions.

Always follow the manufacturer's directions.

## Fastening your Cherrypine timber

Use only high quality hot dipped galvanised or stainless steel nails, screws or bolts.

## Resealing end cuts

We recommend that any cut ends be resealed with Protim® Reseal or similar.

Commercially available timber stain in a similar colour can also be added to the cut ends or machined surfaces if required. Both of these products are available at most hardware stores.
