"Cherrypine, It's the natural alternative I have been looking for. Its unique from all the other landscaping products out there because the colour is added during the treatment process, so it's both durable and attractive."

Lee-Anne Woolmington, NSW Home Owner

The Natural Alternative with colour...

Cherrypine™

Cherrypine™ is a unique blend of nature's best grown softwoods and modern technology, bringing together the strength & beauty of plantation grown timber with the durability of an Osmose® timber preservative system and MicroShades® - the new and unique timber colorant system.

Cherrypine with MicroShades®

Cherrypine utilises Microshades® colourant technology, which involves micronising the colourant particles and impregnating them into the timber within our commercial timber processing facility.

Cherrypine's appearance is a red/brown colour. One of the specific features of this unique system is that the colour does remain more fade resistant when compared to a colour dye.

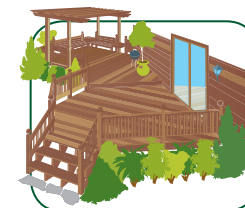

The colour is uniform however Cherrypine will not hide any of the natural characteristics and beauty of wood such as timber grain.

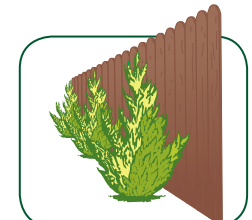

Making an impression that lasts, with Cherrypine - coloured, durable timber
